EPA is planning to release sampling results to the home owners on a weekly basis in the order in which the homes were sampled. Our sampling effort began the week of January 23rd and continued for three and half weeks through March 15th. At this time we are providing results on the 11 wells sampled during the week of January 23rd

Also, why issue 11 families' results now rather than all 60 at one time?

And when do you expect the rest to be out?

Neela -- Here is the EPA statement about the first round of sampling at 11 homes. If you email me your questions, I will try to get you responses asap.

On Jan. 19, as a result of requests from residents and a review of the data we had in hand, EPA announced it would perform water sampling at approximately 60 homes in the Carter Road/Meshoppen Creek Road area of Dimock, Pa. to further assess whether any residents are being exposed to hazardous substances that cause health concerns.

The first round of sampling results is now available for the first 11 homes that were tested during the week of Jan. 23. Sampling results from these 11 homes did not show levels of contamination that could present a health concern. Samples from six of the 11 homes did show concentrations of sodium, methane, chromium or bacteria, but concentrations were all

within the safe range for drinking water. The sampling results also identified the presence of arsenic at two homes.

Out of the 11 homes tested, there are currently three homes receiving an alternate water supply provided by EPA. EPA will continue to provide water to these homes while we perform additional sampling to ensure that the drinking water quality at these homes remains consistent and acceptable for use over time. EPA is also taking a second round of samples from the two homes where arsenic was detected, and although the levels meet drinking water standards, we will resample to better characterize the water quality of these wells. After receiving results from the second round of sampling, EPA will re-evaluate the need to continue providing an alternate water source.

EPA has offered to meet with all the residents to go over their data and answer any health-related concerns. As further quality assured data becomes available for the remaining homes, we will share with the homeowners in an expedited manner. Our actions will continue to be based on the science and the law as we work to help get a clear picture of water quality for these homes in Dimock.

Subject: Deadline request re Dimock water

Hello,

Cathy Milbourn at EPA HQ suggested I contact you. I read late yesterday that EPA has issued findings that state that there is no evidence of contamination of well water in Dimock, PA by hydraulic fracturing. Is that the case? if so, could I get a copy of the report ASAP?

Are any of your scientists available to clarify any questions that might arise once I get the report? My deadline is 4 pm today, ET, so I really need that report

Thanks and allbest
Neela
